

Eliminate the need for  
extensive SAP programming efforts –

**DART**  
IMPORT COMPONENT

The **DART Import Component for IDEA Version Seven** eliminates the need for the usual extensive programming efforts necessary for extracting data out of SAP for import into IDEA. DART (Data Archiving Retention Tool) includes pre-programmed data extracts and views, enabling rapid implementation without any time consuming and expensive programming effort. With this component, users can import data without having to define the files since all the extract files are generated by DART.

Organizations can use DART to extract data from the following modules: Financial Accounting (FI), Account Management (AM), Controlling (CO), Materials Management (MM), Purchase Orders (MM), Sales and Distribution (SD) and Sales and Tax data.

Although DART has been designed to retain financial records in a sequential file to support income tax filing for SAP clients, it is not limited to that purpose; it can also be used to extract a wide range of transaction data as well as master file data. It can also be extended further to include fields, queries, segments and tables that are not part of the standard DART setup.

DART Import Component is an inexpensive and efficient method to get the data out of SAP and into IDEA.

For more information about IDEA and DART visit our website at [www.caseware-idea.com](http://www.caseware-idea.com).

The DART Import Component is one of the family of IDEA Import Components.
